"This plugin is what I have been waiting for to see for years! It has so many useful options that previously you needed to google to find snippets for and it was hard to keep track of

FIND OUT HOW ▼

Content Management	Disable Gutenberg	<input type="checkbox"/>	Disable the Gutenberg block editor for some or all applicable post types.
Admin Interface	Disable Block-Based Widgets Settings Screen	<input type="checkbox"/>	Restores the classic widgets settings screen when using a classic (non-block) theme. This has no effect on block themes.
Log In Log Out			
Custom Code			
Disable Components	Disable Comments	<input checked="" type="checkbox"/>	<p>Disable comments for some or all public post types. When disabled, existing comments will also be hidden on the frontend.</p> <div> <input checked="" type="checkbox"/> Posts (post) <input checked="" type="checkbox"/> Pages (page) <input checked="" type="checkbox"/> Media (attachment) </div> <p>COLLAPSE ▲</p>
Security	Disable REST API	<input checked="" type="checkbox"/>	Disable REST API access for non-authenticated users and remove URL traces from <head>, HTTP headers and WP RSD endpoint.
Optimizations	Disable Feeds	<input checked="" type="checkbox"/>	Disable all RSS, Atom and RDF feeds. This includes feeds for posts, categories, tags, comments, authors and search. Also removes traces of feed URLs from <head>.
Utilities	Disable All Updates	<input type="checkbox"/>	Completely disable core, theme and plugin updates and auto-updates. Will also disable update checks, notices and emails.
	Disable Smaller Components	<input checked="" type="checkbox"/>	<p>Prevent smaller components from running or loading. Make the site more secure, load slightly faster and be more optimized for crawling by search engines.</p> <div> <input checked="" type="checkbox"/> Disable the generator <meta> tag in <head>, which discloses the WordPress version number. Older versions(s) might contain unpatched security loophole(s). <input checked="" type="checkbox"/> Disable version number on static resource URLs referenced in <head>, which can disclose WordPress version number. Older versions(s) might contain unpatched security loophole(s). Applies to non-logged-in view of pages. This will also increase cacheability of static assets, but may have unintended consequences. Make sure you know what you are doing. <input checked="" type="checkbox"/> Disable the Windows Live Writer (WLW) manifest <link> tag in <head>. The WLW app was discontinued in 2017. <input checked="" type="checkbox"/> Disable the Really Simple Discovery (RSD) <link> tag in <head>. It's not needed if your site is not using pingback or remote (XML-RPC) client to manage posts. <input checked="" type="checkbox"/> Disable the default WordPress shortlink <link> tag in <head>. Ignored by search engines and has minimal practical use case. Usually, a dedicated shortlink plugin or service is preferred that allows for nice names in the short links and tracking of clicks when sharing the link on social media. <input checked="" type="checkbox"/> Disable loading of Dashicons CSS and JS files on the front-end for public site visitors. This might break the layout or design of custom forms, including custom login forms, if they depend on Dashicons. Make sure to check those forms after disabling. <input checked="" type="checkbox"/> Disable emoji support for pages, posts and custom post types on the admin and frontend. The support is primarily useful for older browsers that do not have native support for it. Most modern browsers across different OSes and devices now have native support for it. <input checked="" type="checkbox"/> Disable jQuery Migrate script on the frontend, which should no longer be needed if your site uses modern theme and plugins. </div>
