⚡ Optimizations

🔀 Utilities

Content Duplication — Enable one-click duplication of pages, posts and custom posts. The corresponding taxonomy terms and post meta will also be duplicated.

After duplication, redirect to:
◉ Edit screen   ○ List view

COLLAPSE ▲

Content Order — Enable custom ordering of various "hierarchical" content types or those supporting "page attributes". A new 'Order' sub-menu will appear for enabled content type(s). The "All {Posts}" list page for enabled post types in wp-admin will automatically use the custom order.

☑ Pages (page) - Hierarchical

COLLAPSE ▲

Media Replacement — Easily replace any type of media file with a new one while retaining the existing media ID, publish date and file name. So, no existing links will break.

Media Library Infinite Scrolling — Re-enable infinite scrolling in the grid view of the media library. Useful for scrolling through a large library.

SVG Upload — Allow some or all user roles to upload SVG files, which will then be sanitized to keep things secure.

External Permalinks — Enable pages, posts and/or custom post types to have permalinks that point to external URLs. The rel="noopener noreferrer nofollow" attribute will also be added for enhanced security and SEO benefits. Compatible with links added using Page Links To.

Open All External Links in New Tab — Force all links to external sites in post content, where the content hook is used, to open in new browser tab via target="_blank" attribute. The rel="noopener noreferrer nofollow" attribute will also be added for enhanced security and SEO benefits.

Allow Custom Navigation Menu Items to Open in New Tab — Allow custom navigation menu items to have links that open in new browser tab via target="_blank" attribute. The rel="noopener noreferrer nofollow" attribute will also be added for enhanced security and SEO benefits.

Auto-Publish Posts with Missed Schedule — Trigger publishing of scheduled posts of all types marked with "missed schedule", anytime the site is visited.
