Content Duplication

🔵 Enable one-click duplication of pages, posts and custom posts. The corresponding taxonomy terms and post meta will also be duplicated.

After duplication, redirect to:

⦿ Edit screen   ◯ List view

COLLAPSE ▲

Content Order

🔵 Enable custom ordering of various "hierarchical" content types or those supporting "page attributes". A new 'Order' sub-menu will appear for enabled content type(s). The "All {Posts}" list page for enabled post types in wp-admin will automatically use the custom order.

☑ Pages (page) - Hierarchical

COLLAPSE ▲

Media Replacement

🔵 Easily replace any type of media file with a new one while retaining the existing media ID, publish date and file name. So, no existing links will break.

Media Library Infinite Scrolling

🔵 Re-enable infinite scrolling in the grid view of the media library. Useful for scrolling through a large library.

SVG Upload

⚪ Allow some or all user roles to upload SVG files, which will then be sanitized to keep things secure.

External Permalinks

⚪ Enable pages, posts and/or custom post types to have permalinks that point to external URLs. The rel="noopener noreferrer nofollow" attribute will also be added for enhanced security and SEO benefits. Compatible with links added using Page Links To.

Open All External Links in New Tab

🔵 Force all links to external sites in post content, where the content hook is used, to open in new browser tab via target="_blank" attribute. The rel="noopener noreferrer nofollow" attribute will also be added for enhanced security and SEO benefits.

Allow Custom Navigation Menu Items to Open in New Tab

🔵 Allow custom navigation menu items to have links that open in new browser tab via target="_blank" attribute. The rel="noopener noreferrer nofollow" attribute will also be added for enhanced security and SEO benefits.

Auto-Publish Posts with Missed Schedule

⚪ Trigger publishing of scheduled posts of all types marked with "missed schedule", anytime the site is visited.

FIND OUT HOW ▼

- 🔲 Content Management
- 🔳 **Admin Interface**
- → Log In | Log Out
- </> Custom Code
- 🚫 Disable Components
- 🛡 Security
- ⚡ Optimizations
- ✂ Utilities

Clean Up Admin Bar

🔵 Remove various elements from the admin bar.
- ☑ Remove WordPress logo/menu
- ☑ Remove customize menu
- ☑ Remove updates counter/link
- ☑ Remove comments counter/link
- ☑ Remove new content menu
- ☐ Remove 'Howdy'
- ☑ Remove the Help tab and drawer

COLLAPSE ▲

Hide Admin Notices

🔵 Clean up admin pages by moving notices into a separate panel easily accessible via the admin bar.

Disable Dashboard Widgets

🔵 Clean up and speed up the dashboard by completely disabling some or all widgets. Disabled widgets won't load any assets nor show up under Screen Options.
- ☑ Activity (dashboard_activity)
- ☑ At a Glance (dashboard_right_now)
- ☑ Quick Draft (dashboard_quick_press)
- ☐ Site Health Status (dashboard_site_health)
- ☑ WordPress Events and News (dashboard_primary)
- ☐ Yoast SEO / Wincher: Top Keyphrases (wpseo-wincher-dashboard-overview)
- ☐ Yoast SEO Posts Overview (wpseo-dashboard-overview)

COLLAPSE ▲

Hide Admin Bar

⚪ Hide admin bar on the frontend for all or some user roles.

Wider Admin Menu

⚪ Give the admin menu more room to better accommodate wider items.

Admin Menu Organizer

⚪ Customize the order of the admin menu and optionally change menu item title or hide some items.

Enhance List Tables

🔵 Improve the usefulness of listing pages for various post types and taxonomies, media, comments and users by adding / removing columns and elements.
- ☐ Show featured image column
- ☐ Show excerpt column
- ☐ Show ID column
- ☐ Show ID in action rows along with links for Edit, View, etc.
- ☐ Show additional filter(s) for hierarchical, custom taxonomies
- ☑ Remove comments column
- ☑ Remove tags column (for posts)

COLLAPSE ▲

Display Active Plugins First

🔵 Display active / activated plugins at the top of the Installed Plugins list. Useful when your site has many deactivated plugins for testing or development purposes.

Custom Admin Footer Text

⚪ Customize the text you see on the footer of wp-admin pages other than this ASE settings page.

"Great plugin and awesome developer!" ~@mrgy05

"This plugin is what I have been waiting for to see for years! It has so many useful options that previously you needed to google to find snippets for and it was hard to keep track of

FIND OUT HOW ▼

- Content Management
- Admin Interface
- → Log In | Log Out
- </> Custom Code
- ◯ **Disable Components**
- Security
- Optimizations
- Utilities

Disable Gutenberg ⬤○ Disable the Gutenberg block editor for some or all applicable post types.

Disable Block-Based Widgets Settings Screen ⬤○ Restores the classic widgets settings screen when using a classic (non-block) theme. This has no effect on block themes.

Disable Comments ●⬤ Disable comments for some or all public post types. When disabled, existing comments will also be hidden on the frontend.

☑ Posts (post)   ☑ Pages (page)
☑ Media (attachment)

COLLAPSE ▲

Disable REST API ●⬤ Disable REST API access for non-authenticated users and remove URL traces from <head>, HTTP headers and WP RSD endpoint.

Disable Feeds ●⬤ Disable all RSS, Atom and RDF feeds. This includes feeds for posts, categories, tags, comments, authors and search. Also removes traces of feed URLs from <head>.

Disable All Updates ⬤○ Completely disable core, theme and plugin updates and auto-updates. Will also disable update checks, notices and emails.

Disable Smaller Components ●⬤ Prevent smaller components from running or loading. Make the site more secure, load slightly faster and be more optimized for crawling by search engines.

☑ Disable the **generator <meta> tag** in <head>, which discloses the WordPress version number. Older versions(s) might contain unpatched security loophole(s).

☑ Disable **version number** on static resource URLs referenced in <head>, which can disclose WordPress version number. Older versions(s) might contain unpatched security loophole(s). Applies to non-logged-in view of pages. This will also increase cacheability of static assets, but may have unintended consequences. Make sure you know what you are doing.

☑ Disable the **Windows Live Writer (WLW) manifest <link> tag** in <head>. The WLW app was discontinued in 2017.

☑ Disable the **Really Simple Discovery (RSD) <link> tag** in <head>. It's not needed if your site is not using pingback or remote (XML-RPC) client to manage posts.

☑ Disable the default **WordPress shortlink <link> tag** in <head>. Ignored by search engines and has minimal practical use case. Usually, a dedicated shortlink plugin or service is preferred that allows for nice names in the short links and tracking of clicks when sharing the link on social media.

☑ Disable loading of **Dashicons CSS and JS files** on the front-end for public site visitors. This might break the layout or design of custom forms, including custom login forms, if they depend on Dashicons. Make sure to check those forms after disabling.

☑ Disable **emoji support for pages, posts and custom post types** on the admin and frontend. The support is primarily useful for older browsers that do not have native support for it. Most modern browsers across different OSes and devices now have native support for it.

☑ Disable **jQuery Migrate** script on the frontend, which should no longer be needed if your site uses modern theme and plugins.

- </> Custom Code
- 🚫 Disable Components
- ✓ Security
- ⚡ Optimizations
- ✂ Utilities

Limit Login Attempts

🔵 Prevent brute force attacks by limiting the number of failed login attempts allowed per IP address.

`3` failed login attempts allowed before 15 minutes lockout

`3` lockout(s) will block further login attempts for 24 hours

Failed login attempts:

Show `10 ▾` entries

Search: [   ]

IP Address Last Username	Attempts Lockouts	Last Attempt On
No data available in table		

Showing 0 to 0 of 0 entries   Previous   Next

COLLAPSE ▲

Obfuscate Author Slugs

🔵 Obfuscate publicly exposed author page URLs that shows the user slugs / usernames, e.g. *sitename.com/author/username1/* into *sitename.com/author/a6r5b8ytu9gp34bv/*, and output 404 errors for the original URLs. Also obfuscates in /wp-json/wp/v2/users/ REST API endpoint.

Email Address Obfuscator

🔵 Obfuscate email address to prevent spam bots from harvesting them, but make it readable like a regular email address for human visitors.

Use a shortcode like the following examples to display an email address on the frontend of your site:

- [obfuscate email="john@example.com"] to display the email on it's own line
- [obfuscate email="john@example.com" display="inline"] to show the email inline

COLLAPSE ▲

Disable XML-RPC

🔵 Protect your site from brute force, DOS and DDOS attacks via XML-RPC. Also disables trackbacks and pingbacks.

Do more with ASE Pro. Lifetime deal (LTD) available.

Image Upload Control

( ) Resize newly uploaded, large images to a smaller dimension and delete originally uploaded files. BMPs and non-transparent PNGs will be converted to JPGs and resized.

Revisions Control

(●) Prevent bloating the database by limiting the number of revisions to keep for some or all post types supporting revisions.

Limit to [10] revisions for:

- ☐ Posts (post)
- ☐ Pages (page)
- ☐ Custom CSS (custom_css)
- ☐ Patterns (wp_block)
- ☐ Templates (wp_template)
- ☐ Template Parts (wp_template_part)
- ☐ Global Styles (wp_global_styles)
- ☐ Navigation Menus (wp_navigation)

COLLAPSE ▲

Heartbeat Control

(●) Modify the interval of the WordPress heartbeat API or disable it on admin pages, post creation/edit screens and/or the frontend. This will help reduce CPU load on the server.

On admin pages

( ) Keep as is ( ) Modify (●) Disable

Set interval to once every [1 minute ▼] (Default is 1 minute)

On post creation and edit screens

( ) Keep as is ( ) Modify (●) Disable

Set interval to once every [15 seconds ▼] (Default is 15 seconds)

On the frontend

( ) Keep as is (●) Modify ( ) Disable

Set interval to once every [10 minutes ▼]

Email Delivery

⬤○ Set custom sender name and email. Optionally use external SMTP service to ensure notification and transactional emails from your site are being delivered to inboxes.

Multiple User Roles

⬤○ Enable assignment of multiple roles during user account creation and editing. This maybe useful for working with roles not defined in WordPress core, e.g. from e-commerce or LMS plugins.

Image Sizes Panel

⬤○ Display a panel showing and linking to all available sizes when viewing an image in the media library. Especially useful to quickly get the URL of a particular image size.

View Admin as Role

⬤○ View admin pages and the site (logged-in) as one of the non-administrator user roles.

Password Protection

⬤○ Password-protect the entire site to hide the content from public view and search engine bots / crawlers. Logged-in administrators can still access the site as usual.

Maintenance Mode

⬤○ Show a customizable maintenance page on the frontend while performing a brief maintenance to your site. Logged-in administrators can still view the site as usual.

Redirect 404 to Homepage

⬤○ Perform 301 (permanent) redirect to the homepage for all 404 (not found) pages.

Display System Summary

⬤○ Show quick summary of the system the site is running on to admins, in the "At a Glance" dashboard widget. This includes the web server software, the PHP version, the database software and server IP address.

Search Engines Visibility Status

⬤○ Show admin bar status and admin notice when search engines are set to be discouraged from indexing the site. This is set through a "Search engine visibility" checkbox in Settings >> Reading.
